

The Human Body by Donal

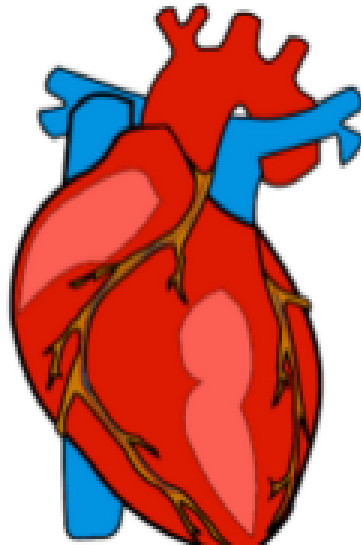

Human Brain

The human body is controlled by the brain. The brain is like a super computer. Your brain controls every move you make.

Human Heart

The heart is a muscle that pumps blood around your body.

The Kidney

We have 2 kidneys. Our kidney cleans our blood. It sends our liquid waste to our bladder. A kidney is the size of a computer mouse.

The Lungs

Our lungs help us breath. They help us take in fresh air (oxygen) and they get rid of bad air for us.

The Stomach

Stomach stores our food and breaks it down.

Test- How well did you listen?

- What does our brain do?
- What does our kidneys do?
- What does our heart do?
- What does our lungs do?
- What does our stomach do?
