

1. **Senior Infants Exploring “ Light and Shadows”** .We used the Sun dial on the basketball court to tell the time on a sunny day in October. Daire is showing us that it is just after 11am.

Children having fun with their shadows and making lots of shapes:

2. Experiment showing that if the primary colours are spun quickly enough white colour can almost be produced.

This was done with a small battery operated whisk where the colour wheel was attached to the top and rotated and as the speed increased and decreased the children told what

colours they were seeing as they merged.
