

Streamscapes.

StreamScapes is a creative and effective 'first-contact' resource for engaging communities in local water quality and biodiversity issues.

Working with Schools and Community Groups, StreamScapes produces compelling localised projects which create a buzz and build pride in local natural assets, leading to behaviour change and enhanced local awareness.

On 14th June Stephanie from Streamscapes in Bantry came to visit us. She discussed plants and river life as well as pollution and other issues related to streams and rivers. Later on in the morning we went to our local stream to collect specimens to bring back and examine.

The class went about their task with gusto and netted fish, larvae and insects etc. to bring back to the classroom.

Even where the water was only inches deep Stephanie explained to the class that evidence of stream life could be found.

Stephanie was like an encyclopedia when it came to listing out the different creatures.

It was probably the hottest day of the year and we were all glad to paddle in the nice cool stream that flows behind our school.
